Health in Remote Areas
Fostering Investment for Health Innovation

Over the past twenty years, the emergence of medical deserts has reflected a growing concern about the geographical accessibility of healthcare.

1/2
More than half of the global population lacks access to essential healthcare.

Addressing remote area's healthcare challenges and fostering open collaborations to enter into a new healthcare era will be beneficial on a global scale.

Case study

With its strong commitment to innovation for positive impact, BLUMORPHO has identified unmet needs where innovation can provide access to higher quality healthcare for all populations, regardless of their socio-economic status. We support the adoption of relevant solutions with the necessary financing to generate direct and positive impact for local populations.

Example of Niomre

In collaboration with the Senegalese Ministry of Health, BLUMORPHO is addressing urgent healthcare needs in Niomré, a region in northwest Senegal which has only one health center with no doctors (only a nurse and a midwife) and unreliable electricity. Our teams are also exploring collaboration opportunities in other countries, including Togo.
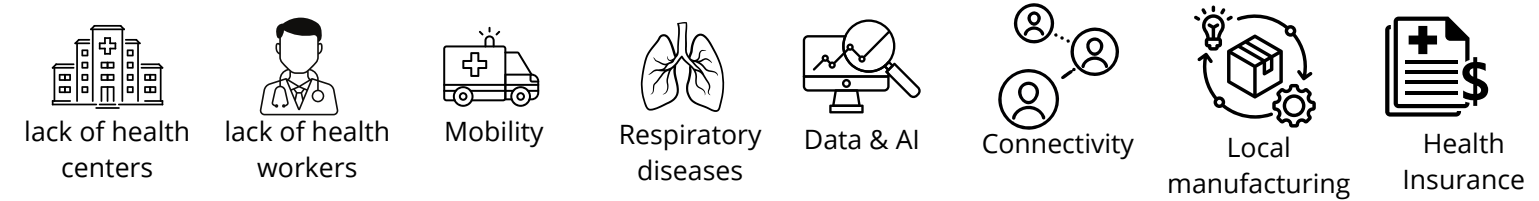

With its unique process in ecosystem innovation and collaboration, Blumorpho and its partners are launching the initiative **"Better Health in Remote Areas"** to permit the introduction and selection of the most relevant innovation to address unmet needs, and to support their financing. This action is designed to strengthen local capacities and entrepreneurship for local impact.

BLUMORPHO

Addressing Remote Areas Needs : A Call To Action for innovative and digital health solutions

Niomre's needs

| Energy | Water | Infantil diseases | Maternal health | Contraception & fertility | Dialysis | Diabetes | cardiovascular diseases | Malaria & tropical diseases |

HOLICARE needs : A European Project Bringing Diagnostic Solutions to Sub-Saharan Africa

| lack of health centers | lack of health workers | Mobility | Respiratory diseases | Data & AI | Connectivity | Local manufacturing | Health Insurance |

Through these topics, key stakeholders including innovative start-ups, corporates, research centers, investors, representatives from public authorities, philanthropists are joining to contribute to reach real and positive impact.

An ecosystem process to build strategic, financial and impact collaborations

Who is involved?

- Governments Member
- Philanthropists and Investors
- NGOs, Aid Organizations
- Local Communities
- Public Authorities
- Start-ups and Innovative Companies
- Corporates, CSR
- Insurance Providers
- Educational Institutions

Why are they joining?

- **Financial Players**
To explore opportunities for impact investment.

- **Innovative Companies**
To introduce their solutions fitting unmet needs and meet with potential strategic and financial partners.

- **Corporates**
To detect CSR projects to join and support, and to build strategic collaborations.

- **Philanthropy**
To support innovation with proven positive impact.

This ecosystem includes players from the Senegalese Ministry of Health, health players, corporates, investors and innovators aiming to support concrete actions for an immediate local impact.
